

## Development of Core Areas Through Private Sector Collaboration and Support

In the heart of the city, the Tokyo Metropolitan Government is leveraging the dynamism of the private sector to promote urban development through public-private collaboration in order to advance the formation of an international financial center and other urban spaces that have elegance and multi-functionality befitting an international business center.

Additionally, in Priority Development Areas for Urban Renaissance, designated according to the Act on Special Measures Concerning Urban Renaissance, Tokyo is striving to boost international competitiveness and the appeal of the city by, for instance, attracting outstanding projects by private developers.

### ■ Otemachi/Marunouchi/Yurakucho District

In 1996, the TMG, together with Chiyoda-ku, the East Japan Railway Company, and local landowners and leasehold owners, established the Panel for Otemachi/Marunouchi/Yurakucho District Community Development. In this way, the public and private sectors are cooperating to advance the creation of an attractive area, bustling with activity, which has an elegance befitting the "face of Tokyo, Japan's capital."

In this district, about 36 reconstruction and other projects have been completed up to now, creating an area that is versatile in function with high quality business, cultural, and commercial facilities. Notably, in the Otemachi district a serial redevelopment project utilizing land where joint offices of the central government once stood is being advanced with the aim of renewing the district's functions as a business nerve center and strengthening business support functions. The first through third phases of development have been completed, and the fourth phase is currently underway.

Furthermore, along with preserving historic sites such as the Meiji Seimei Building, the creation of landscapes taking an all-encompassing design approach was advanced for the Tokyo Station Marunouchi side area, with the restoration of the red-brick station building completed in 2012 and the Gyoko-dori Avenue project and the Marunouchi Station Square completed in 2017.

In order to enhance the city's functions as an international business center, the TMG will continue to promote urban development through public-private collaboration.

### ■ Development of the Bay Area

As a hub for land, sea, and air transport located in close proximity to the city center, Tokyo's Bay Area, home to Haneda Airport and the Port of Tokyo, has high potential to serve as a center to support broad interaction between people and the exchange of goods and information. In line with urban development to facilitate the area's ongoing role in supporting the city's activities and to make the area a legacy of the Tokyo 2020 Games, focusing on competition venues and other facilities, it is essential to view the Bay Area and the inland area that forms central Tokyo as one and raise the vitality of the Greater Tokyo Area as a whole.

In accordance with the Tokyo Bay eSG Urban Development Strategy 2022, which was formulated based on the Grand Design for Urban Development and the Tokyo Bay eSG Project (Version 1.0), the TMG will advance initiatives that aim to realign the area to create a next-generation city that incorporates the concept of sustainable recovery.

Image of the Otemachi serial redevelopment project

Image of the bay area in the future

## Development of the Area around Shinagawa and Tamachi Stations

The overall potential of the area around Shinagawa and Tamachi stations is growing ahead of changes such as a further increase of regular international flights to and from Haneda Airport and the scheduled launch of Linear Chuo Shinkansen high-speed maglev train services in 2027. With this area home to large parcels of vacant or underutilized land, and its designation as a Special Zone for Asian Headquarters in 2011, a Special Priority Area for Urban Renaissance in January 2012, and a National Strategic Special Zone in May 2014, further advancements are expected for development that utilizes the dynamism of the private sector. Based on these developments, the TMG revised existing guidelines and released the Community Development Guidelines for the Area around Shinagawa Station and Tamachi Station in September 2014, making “Shinagawa—an international hub to drive Japan’s future growth” the vision for the area. In response to the announcement of plans to develop a pedestrian overpass over Route 15 and the idea to extend an existing subway line to Shinagawa, the 2014 guidelines were partially revised in March 2020. To realize this vision, the TMG will continue to advance staged realignment and improvement of Shinagawa Station and cultivate Priority Development Districts to drive the area’s regeneration, while fully leveraging the strengths of the private sector.

Area around Shinagawa Station and Tamachi Station

## Redevelopment of the Area Around Shinjuku Station

By taking the opportunity presented by the decision to rebuild the station building, which was in need of renewal, to realign the district, including facilities such as the station, station squares, and station building, in an integrated manner, and construct a new pedestrian walkway above the rail tracks, the project is transforming the station into Shinjuku Grand Terminal, and also promoting the renewal of functions in the Shinjuku Station area to create a high-quality hub for international exchange using the entire area.

In the Nishi-shinjuku district, where half a century has passed since the Shinjuku sub-center was built, the need to realign the area to make it a human-centric space has also emerged. In response to this, the Nishi-shinjuku District Redevelopment Policy, which sets forth the direction for redevelopment in the area, was announced in March 2023. The TMG will continue to advance the study of measures to realize the policy in tandem with city planning and coordination with stakeholders.

## Development of the Area Around Shibuya Station

In the Shibuya Station area, developments such as the relocation of the Tokyu Toyoko Line underground and commencement of through-services with the Tokyo Metro Fukutoshin Line in March 2013 have provided the opportunity to begin integrated redevelopment of the surrounding area that combines upgrading the functionality of station facilities and realigning urban infrastructure. The TMG will continue to work in cooperation with the central government, Shibuya-ku, railway companies, and private developers, offering appropriate guidance to private-sector development projects in the area around Shibuya Station. By integrating reorganization and development of urban facilities with that of the surrounding area, including improvements to railways alongside the redevelopment of station plazas and the creation or realignment of pedestrian walkways, the TMG will greatly improve the safety and convenience of Shibuya Station and the surrounding area.

In addition, the TMG will promote urban planning aimed at strengthening global competitiveness by adopting projects that enhance Shibuya's functionality as an international center to promote culture and exchange, as well as supporting advanced business functions and the growth of sectors such as the content industry.

## Urban Renaissance Projects

The TMG is implementing urban development to establish charm and vitality befitting an international city.

Through high-quality private sector development projects carried out in Priority Development Areas for Urban Renaissance based on the Act on Special Measures Concerning Urban Renaissance, urban development—including initiatives to boost international business functions, reduce environmental impact, create urban greenery, and form an elegant cityscape—is promoted to strengthen international competitiveness.

Also utilizing the Special Priority Development Area for Urban Renaissance system established under the revised 2011 Act on Special Measures Concerning Urban Renaissance, the TMG will continue to advance urban renewal with the aim to further build up international competitiveness through quality private-sector projects.

Special Priority Development Areas for Urban Renaissance/Priority Development Areas for Urban Renaissance

# Use of Metropolitan and Central Government-Owned Land

To promote the urban renewal of Tokyo, the TMG is undertaking projects that use metropolitan government-owned land and effectively utilize the vitality and resources of private firms. For example, land created through the rebuilding of metropolitan housing developments can be utilized in development projects that are tailored to the characteristics of each area, encourage people to live in central Tokyo, improve districts with close-set wooden houses, and deal with the graying of society.

In addition, the Bureau is advancing “urban renewal upgrade projects” that effectively utilize plots of metropolitan government-owned land. Partnering with the central government, local municipalities, and others, the TMG will also work to establish high-quality urban spaces on land owned by the central government.

## Urban Renewal Upgrade Projects

Urban Renewal Upgrade Projects aim to create a Tokyo that is vibrant and attractive. Under a TMG-wide initiative, the program advances urban development by establishing concepts tailored to the characteristics of an area and bringing in investment and expertise from the private sector for the integrated development of several plots of metropolitan government-owned land, while also bringing about development of the surrounding area.

In implementing projects, guidelines are formulated and developers and others selected through public tenders conclude agreements such as fixed-term land lease agreements with the TMG in order to construct, operate, and maintain mixed-use facilities and carry out area management activities.

In the Shibuya district, the project at the former site of the Tokyo Metropolitan Miyashita-cho apartment complex was completed and a commercial and residential complex was opened in April 2017. In addition, the planned developer was selected in March 2022 for a joint development project to use the former site of the Tokyo Metropolitan Children’s Hall and the adjacent land owned by Shibuya-ku which is scheduled to be completed in fiscal 2026. In the Takeshiba district, a mixed-use facility with office and commercial space opened in September 2020.

### Takeshiba District

- (1) Metropolitan government-owned land used:  
Approx. 1.5 hectares  
Former sites of ①Tokyo Metropolitan Archives, ②Tokyo Metropolitan Inspection Institute of Weights and Measures, and ③Tokyo Metropolitan Industrial Trade Center
- (2) Concept  
To establish a dynamic center for business and commerce that provides an environment rich in greenery, the ocean, and culture

### Shibuya District

- (1) Metropolitan government-owned land used:  
Approx. 2.6 hectares  
Former sites of ①Miyashita-cho apartment complex, ②Tokyo Metropolitan Children’s Hall, and ③Tokyo Metropolitan Aoyama Hospital
- (2) Project goal  
To create a flow of people linking the Shibuya, Aoyama, and Harajuku areas, and form a center setting trends for lifestyle and culture, the fashion industry and other fields

②Conceptual drawing of the project at the former site of Tokyo Metropolitan Children’s Hall (bird’s eye view)

## Urban Development Utilizing Metropolitan Land

Private-sector projects utilizing metropolitan government-owned land have been implemented in such districts as Minami-Aoyama 1-chome, Konan 4-chome, Kachidoki 1-chome, Higashimurayama City Honcho, and Kamimeguro 1-chome. And, we will continue advancing urban development that utilizes private-sector resources in the following areas.

### Kita-Aoyama 3-Chome District Urban Development Project

This project combines rebuilding of metropolitan housing blocks into a high-rise building and employing the vitality of the private sector in the use of the land created by rebuilding. Integrated urban development with the area along Aoyama-dori Avenue is being advanced in stages to create a center that sets the latest trends in culture and fashion. The private-sector development area was completed in May 2020. The basic plan stipulating the direction for integrated urban development in the area along Aoyama-dori Avenue was finalized with the approval of all parties involved in April 2020. Development is proceeding in the area based on this plan.

Conceptual drawing based on the direction for development stipulated in the basic plan (Final plans subject to change dependent upon future negotiations.)

### Shiodome West District Metropolitan Government-Owned Land Utilization Project

Based on the concept of “working with the attractive space built by the community to form an area with sustainable vitality,” development is being advanced through a private sector project selected by public tender for proposals for initiatives that along with contributing to the creation of sustainable vibrancy in Shiodome West district, also raise the value of the community.

Construction of the Fuji Soft Shiodome ANNEX Building on Plot B was completed in March 2022, with construction on Plot A scheduled for completion in fiscal 2023.

Map (created using fundamental geospatial data from the Geospatial Information Authority of Japan) and conceptual drawing of the project

## Tokyo Sky Corridor Project: Revitalization and Use of the Tokyo Expressway (KK Route)

Studies of a new circular route to be established in central Tokyo in conjunction with the relocation of a section of the metropolitan expressway underground determined that the role of the Tokyo Expressway (KK Route) as a road for the exclusive use of motor vehicles would greatly diminish as a result. In response, a panel established to study the future vision for the Tokyo Expressway’s (KK Route) existing facilities compiled recommendations on how to transform the elevated portion of the KK Route into a pedestrian-centered public space in November 2020. In March 2021, the Policy for the Rebirth of the Tokyo Expressway (KK Route) was formulated as the TMG’s policy, incorporating the panel’s recommendations related to the goals for revitalization and use, and outlining matters such as the positioning of elevated facilities for renewal. This was followed, in March 2022, by the formulation of an interim report on the policy for implementation of the project, containing details related to the development of the elevated space and outlining the roles of the entities responsible for development, among other matters. Furthermore, the Policy for Implementation of the Rebirth of the Tokyo Expressway (KK Route) was formulated in March 2023 for realization of the Tokyo Sky Corridor project. The policy outlines the basic approach with respect to measures to be undertaken by the TMG, Tokyo Expressway Co., Ltd., and other parties involved, including community development projects to be implemented together.

Location of the Tokyo Expressway (KK Route)

## Akishima District (Former Site of the Tachikawa Air Base)

This district is approx. 70 hectares of land, a portion of the former site of Tachikawa Air Base which was reverted to Japan from the United States in 1977. While promoting the development of the International Justice Center and the introduction of business and commercial functions, the greenery of the area’s iconic Showa Kinen Park will be used to create a high-quality urban space that is environmentally friendly.

The city plans, including land readjustment projects, were decided in March 2012. Land readjustment projects are being carried out by the Urban Renaissance Agency (UR), an independent administration corporation. In order to ensure the smooth progress of the projects, the TMG is working with the central government, city, and others to provide technical support.

Akishima District Land Utilization Plan for the Former Site of Tachikawa Air Base

# Urban Development Undertaken by the Tokyo Metropolitan Government

Land readjustment and urban redevelopment projects implement comprehensive urban development in an integrated manner such as building roads, parks, and plazas, as well as developing residential land and supplying quality urban housing.

The TMG takes the initiative in implementing projects that are highly public in nature such as the creation of new transportation networks.

Land readjustment and urban redevelopment projects are also carried out by other entities, including municipalities, individuals, associations, organizations, and public corporations.

The TMG is also using urban development projects as opportunities to remove utility poles on streets.

## Land Readjustment Projects

Land readjustment projects by the TMG are underway in central Tokyo, the surrounding special-ward area, and waterfront area, in order to enhance the urban functions of built-up areas and create a highly-convenient city.

### Land Readjustment Project for Redevelopment of a Transportation Hub Immediate Area Surrounding Shinjuku Station

To create a “Shinjuku Grand Terminal” that is easy to use for everyone, in line with the Policy for Redevelopment of the Shinjuku Core Area, the land readjustment project in the immediate area surrounding Shinjuku Station aims to concentrate diverse functions that highlight the characteristics of the area as a major hub and enhance the movement of pedestrians in the area by reorganizing the site when the station building, which is in need of renewal, is rebuilt.

In implementing this project, to make this a human-centered area, station squares on the east and west sides of the station, a pedestrian walkway, and other facilities will be constructed in stages. In addition, land designated for housing will be reorganized seeking to achieve intensive use, including the development of commercial and business facilities befitting station front space, and land use will be advanced, while working to fully integrate development with railway and other facilities.

The TMG, as executor of this project, aims to complete the pedestrian walkway and a portion of the squares on the east and west sides of the station by FY2035, securing a new pedestrian overpass above Shinjuku Station’s railway tracks.

View looking toward Kabuki-cho from Shinjuku Station East Exit.

### Land Readjustment Projects in Redevelopment of Built-Up Areas

In the Mizue Station West, Shinozaki Station East, Rokucho, and Hanahata North districts, the TMG is working to develop a quality living environment in the areas along the Toei Shinjuku Line and the Tsukuba Express Line. In the Mizue Station West district, utility poles have been removed on some access streets.

Rokucho district

### Land Readjustment Projects in Tokyo's Waterfront Area

In the Harumi 4-chome and 5-chome districts, as well as the Toyosu and Ariake-kita districts, regional arterial roads linking central Tokyo to the Tokyo Waterfront City area are being constructed and mixed-use development combining business, commercial, cultural, and residential facilities has been advanced. (Ariake-kita district project period: through FY2024)

Waterfront area  
(Harumi 4 & 5-chome, Toyosu District, Ariake-kita District)

## Development of Hubs in the Tama Area

The TMG formulated the Basic Plan for the Development of Hubs in the Tama Area in August 2009, positioning the five cities of Hachioji, Tachikawa, Ome, Machida, and Tama New Town and other locations as hubs. In line with this plan, the TMG has been promoting the creation of hubs, working to realize a self-sufficient Tama area full of vitality and appeal that can achieve further prosperity. In September 2019, the Grand Design for Urban Development established the Tama Innovation Exchange Zone to make the area one that aims to create diverse innovation.

Based on these plans, in addition to the Future Tokyo: Tokyo's Long-Term Strategy (March 2021) and the Policy for Initiatives for the Formation of Innovation Creation Hubs in the Tama Area (February 2020), the TMG, while working with local municipalities to implement pilot programs in the cities of Tama, Fuchu, Hino, and Hachioji, among other efforts, has been promoting measures for the establishment of hubs that leverage local characteristics.

Taking into consideration the outcomes of these pilot programs and other information, the TMG will study the formulation of a new urban development strategy for the Tama area, with the aim to roll out measures for the entire area.

## Tama New Town Projects

Tama New Town, which was developed to cope with the housing shortage in Tokyo during the period of high economic growth and the accompanying rampant development of housing land in the Tama area, covers a total area of approximately 2,853 hectares spreading over the four cities of Hachioji, Machida, Tama, and Inagi. Over the years since 1971 when residents began to move in to communities, the area has evolved into a multi-functional hub that is home to 220,000 people and a diverse range of facilities, including housing, business, commercial, educational, and cultural facilities.

However, as 50 years or more have passed since housing complexes in the area first welcomed residents, issues such as the aging of these facilities and the residents as well are surfacing. Therefore, the TMG is working in close cooperation with local municipalities and other relevant parties toward renewal of Tama New Town, including formulating the Renewal Guidelines for Tama New Town Area in February 2018. Specifically, in the Suwa and Nagayama districts, the first districts to welcome residents, the TMG is working with Tama City to promote reconstruction and other improvements in the area of Nagayama Station to make it a model for all of Tama New Town.

North side of Tama Center Station

Tama Center area

## ■ Urban Redevelopment Projects Undertaken by the Metropolitan Government

An Urban Facilities Redevelopment Project, which develops essential urban facilities such as city-planned roads and promotes intensive use of the land in surrounding areas, is being implemented by the TMG in the Sengakuji Station district. In addition, the TMG is undertaking an Urban Redevelopment Project in the West Harumi 5-chome district to develop the area as a legacy of the Tokyo 2020 Games.

To promote the steady progress of these projects, the vitality of the private sector is employed through such programs as the designated builder system.

### Urban Facilities Redevelopment Project Sengakuji Station District

Sengakuji Station serves as a regional transportation hub, linking the Keikyū Line, which provides access to Haneda Airport, and the Toei Asakusa Line, which provides access to the city center and Narita Airport. With increased demand for access to Haneda Airport, the station's importance is growing. Additionally, with development progressing in the area around the station, the number of people who use Sengakuji Station is expected to grow further.

Taking into consideration the need to improve station facilities in order to respond to such an increase in station users and to ensure user safety and convenience, including passengers transferring between train lines, the TMG has decided to work to develop the station and other urban infrastructure in an integrated manner through an urban redevelopment project.

To date, the Work on the project began in 2018, and steady progress continues to be made, including the opening of Auxiliary Route 332, removal of existing buildings, selection of the designated builders, and work on the final design for the new building and buried cultural property survey at the site.

Sengakuji Station District Development Area

### Urban Development as a Legacy of the Tokyo 2020 Games: The West Harumi 5-chome District (Former Site of the Olympic and Paralympic Village)

The TMG is now working to develop the West Harumi 5-chome district, the former site of the Olympic and Paralympic Village, to be a legacy of the Games.

Following completion of the Games, in fiscal 2021, work began on renovating the buildings that were used as the Olympic and Paralympic Village and constructing the high-rise residential buildings. Leveraging the area's seaside location and proximity to the city center, the TMG is advancing the development of a community where various residents, including families with children, senior citizens, and foreign nationals, can interact and lead fulfilling lives.

In addition, by constructing a multi-mobility station in the district to serve as a traffic square to support the introduction of route bus, TOKYO BRT, bike share, and other services, as well as developing a pier for ships which also gives consideration to barrier-free access, all in an integrated manner, various modes of transportation will be provided.

Furthermore, to implement the use of hydrogen as an energy source for the community, a hydrogen station and hydrogen pipeline will be built in the district, among other efforts, with the aim to realize a community that will serve as a model for a city leading the world in environmental policies.

The TMG will continue to promote development of these facilities in the lead up to the completion of a portion of the projects by the end of fiscal 2023 and the move-in of residents in the spring of 2024.

Artist's rendition of the Urban Redevelopment Project at the time of completion

#### Overview of the Type 1 Urban Redevelopment Project in the West Harumi 5-chome district

○Area: about 18 hectares

○Plan overview

[Overview of buildings]

※Development undertaken by designated builders (entities that carry out the construction of buildings)

•No. of buildings: 24 •No. of units: approx. 5,632

[Overview of public infrastructure]

•Major road (Auxiliary Route 314) Length: approx. 210m

•Access Street 5-1 and 3 others Length: approx. 1,570m

[Project period]

FY2016 through FY2025

## ■ Urban Development Undertaken by the Private Sector and Others

Landowners and leaseholders, as individuals or associations (“private sector and others”), undertake numerous land readjustment and urban redevelopment projects in many districts in Tokyo.

The TMG is responsible for approving the project and land rezoning plans and so on, and offers necessary supervision, guidance and financial support for the smooth implementation of these projects.

It also takes a supervisory position in approving the land readjustment and urban redevelopment projects undertaken by the municipalities and in the execution of subsidies granted from the central government to these projects.

## ■ Land Readjustment Projects Undertaken by the Private Sector and Others

As of the end of December 2022, land readjustment projects by the private sector and others were underway in 51 districts (including projects undertaken by municipalities.) In the special ward area, new urban development that utilizes large vacant parcels of land in the area around Shinagawa North district (Minato-ku) and vacant land formerly part of Haneda Airport (Ota-ku) is underway. An integrated urban redevelopment project is also being carried out within an area designated for land readjustment projects in the Nakano 2-chome district (Nakano-ku).

In the Shibuya Station district (Shibuya-ku), land readjustment projects are also providing an opportunity for renewal and reorganization of station facilities as well as reorganization of urban infrastructure and the area itself.

In the Tama area, in the Inagi Minamiyama Tobu district (Inagi City), work on dangerous escarpments and major roadways, as well as removal of utility poles, is underway for improved safety of residents, while at the same time a rich green urban area is being created.

Shibuya Station district

Inagi Minamiyama Tobu district

## ■ Urban Redevelopment Projects Undertaken by the Private Sector and Others

As of the end of December 2022, urban redevelopment projects by the private sector and others were underway in 54 districts, and in a further 15 districts, city plans have been decided and projects are due to start.

During 2022, in the ward area, a project was completed in the Yaesu 2-chome-kita district of Chuo-ku, located in front of Tokyo Station. A property befitting the gateway to the global city of Tokyo that combines multiple functions in an integrated manner, including high-standard office and commercial space, lodging facilities, community interaction space, and public facilities, was developed. In addition, a network of pedestrian spaces that enhances the walkability of the area around the station and a bus terminal that will improve access to international airports and cities outside of Tokyo were also created.

In the same year, work in the Higashi-ikebukuro 4-chome Block No. 2 district of Toshima-ku was also completed. By widening narrow access roads and reconstruction to create a highly earthquake and fire-resistant shared building, a safe and secure urban area has been realized. Furthermore, with the location serving as a transport node for the Tokyo Metro Yurakucho Line and the Toden Arakawa Line, community plazas and a barrier-free route to the nearby Tokyo Metro Higashi-ikebukuro Station were also developed.

Yaesu 2-chome-kita district

# Community Renewal

For the comprehensive promotion of urban development in Tokyo, it is important to also carry out urban renewal that addresses the conditions existing in local communities. Such efforts include the steady advancement of improvement of built-up areas through block rearrangement as well as development that gives due attention to the townscape. The TMG is promoting such “community renewal” efforts.

## Ordinance to Promote Elegant Neighborhoods in Tokyo

This ordinance provides three systems for creating unique and attractive neighborhoods. These systems are intended to encourage local initiatives and efforts for town development in order to advance community renewal and enhance the charm of Tokyo.

### System for urban development through block rearrangement

The purpose of this system is to create attractive neighborhoods by encouraging joint rebuilding and other improvements in areas that present development challenges, such as densely built-up communities.

These areas are designated as neighborhood renewal districts, and a renewal policy that serves as the guideline for the development of each neighborhood is also formulated at the same time. This policy serves to enhance local motivations for development by providing advance notice of the future image of the area and an outline of deregulations that can be implemented in line with the degree of community contribution. A city plan is then drawn up according to this policy for a staged implementation of development.

### System for the creation of townscapes

In this system, areas that are particularly important from the perspective of townscapes are designated as priority townscape districts. These include districts where efforts are being made to utilize historic or cultural assets to create attractive landscapes and those scheduled for development projects. The local community will play a central role in this system to draw up townscape guidelines together with professional urban designers, which incorporates local color and characteristics. (As of the end of December 2021, 12 districts have been designated.)

Shibamata Taishakuten district(priority townscape district)

### Registration system for local community development groups

The TMG registers groups that can engage proactively in community development activities to enhance community charm by incorporating local color and characteristics. By encouraging their activities, resources of the private sector are used to enhance the appeal of Tokyo. (As of December 1, 2022, six groups involved in creating townscapes and 100 groups involved in utilizing open spaces for community activities have been registered.)

Examples of urban development for utilizing open spaces for community activities by local groups

## Promotion of Barrier-Free Urban Design

### Making Buildings Barrier-Free

The TMG is promoting the development of barrier-free structures based on an ordinance for the development of buildings that can be used without difficulty by the elderly and those with disabilities (Barrier-Free Building Ordinance), which stipulates barrier-free requirements depending on the use and size of buildings to ensure that buildings are more accessible to all people including the elderly, persons with disabilities, and those with infants.

Image of improvements to make buildings barrier-free

Elimination of steps through the installation of ramps

Barrier-free restroom

With an eye to the Tokyo 2020 Games and developments such as the continued super-aging of the population that lies ahead, Tokyo's barrier-free ordinance was revised in March 2019 to create a more accessible environment at hotels and other lodging facilities for all, including people with disabilities and senior citizens. The revised ordinance establishes minimum standards for specifications such as the removal of steps and entrance width of "ordinary guest rooms," rooms for non-wheelchair users as stipulated by the Act to Promote Smooth Mobility for Senior Citizens, the Disabled, etc., (Barrier-Free Act).

Barrier-free guest room

Barrier-free bathroom

## ■ Making Railway Stations Barrier-Free

To advance barrier-free urban development so that everyone can get around the city with peace of mind, the TMG is working to make railway stations barrier-free through subsidies to municipalities and railway operators.

Elevator (Tokyu Shibuya Station)

Platform door (Keio Shinjuku Station)

### Overview of the Approach to Prioritization of Construction Related to Making Railway Stations Barrier-Free

In addition to existing initiatives, to further barrier-free improvements at railway stations, the TMG compiled and released the Approach to Prioritization of Construction Related to Making Railway Stations Barrier-Free in September 2019. Based on this approach, starting in fiscal 2020, the TMG expanded and enhanced subsidies for projects which promote the overall barrier-free environment at railway stations (for JR and private railway companies), and will continue advancing barrier-free initiatives.

#### Elevator

- Ongoing initiatives
  - Subsidy for securing one route
- New initiative<sup>※ 1, 2</sup>
  - Subsidy for additional routes to ground level and transfer routes to other railways, etc.

Image of Barrier-Free Routes at Stations

#### Platform door

- Ongoing initiatives
    - Subsidy for stations used by 100,000 or more
  - New initiative<sup>※ 1</sup>
    - Subsidy for stations used by fewer than 100,000
- ※ 1 Railway operators that receive subsidies draw up and release construction plans based on the approach to prioritization of construction.
- ※ 2 Starting from fiscal 2023, projects involving additional routes and transfer routes will need to be stipulated within a Basic Barrier-Free Plan, etc.

Platform Door Installation Ratio (JR and Private Railway Companies)

## ■ Area and Integrated Barrier-Free Improvements in Local Communities

To realize communities in various areas of Tokyo municipalities where everyone, regardless of age or disability, can live comfortably and with peace of mind, the TMG is providing technical and financial support for the creation of Basic Barrier-Free Plans and Master Plans for Promoting Facilitation of Smooth Movement, etc., implemented by the municipalities.

<Image of a Basic Barrier-Free Plan and Master Plan for Promoting Facilitation of Smooth Movement, etc.>

## ■ Facilitating Easier Use of Land of Unknown Ownership

Through the Projects to Improve the Welfare of Local Communities system established under the Act on Special Measures to Facilitate Easier Use of Land of Unknown Ownership, which went into effect in June 2019, it is possible to utilize land of unknown ownership to build facilities to improve the welfare and convenience of residents in the local community and others.

The system enables local public entities, private companies, NPOs, local neighborhood associations, and others to use land of unknown ownership that meets certain criteria for a maximum of ten years (20 years in some cases) by receiving approval from the prefectural governor.

## ■ Initiatives for the Realization of Smart Tokyo

The TMG formulated Future Tokyo: Tokyo's Long-Term Strategy (March 2021) and the Smart Tokyo Implementation Strategy (February 2020). The aim is to realize Smart Tokyo, Tokyo's version of Society 5.0, where Tokyo's potentials are drawn out by the power of digital technology and residents enjoy a high quality of life.

With the goal to realize Smart Tokyo, in fiscal 2022, the TMG continued to study urban development that uses data on the movement of people and other information in the Nishi-Shinjuku district, while taking into consideration urban development trends in the area. In the Minami-Osawa district, through the formation of a council with the local municipality, Tokyo Metropolitan University, local companies and organizations, the TMG is furthering discussions and promoting practical urban development that leverages cutting-edge technology. As part of these efforts, pilot programs, such as an electric kickboard scooter sharing service and an AR navigation system application that utilizes 3D maps, were conducted in fiscal 2022. Furthermore, with regard to the creation of a 3D digital map of the city, to promote the creation of a digital twin that will support the realization of Smart Tokyo, the TMG is obtaining point cloud data for all of the built-up areas of the special wards, and is creating 3D city models of Priority Development Areas for Urban Renaissance and other areas.

3D Digital Mapping of the city

Example of field tests in the Minami-Osawa district
