

## **Comprehensive Policy for Green Conservation**

Especially for the efforts to conserve existing green in private land and to create green in urban spaces, the Tokyo Metropolitan Government and the municipalities (except island area) jointly instituted “Comprehensive Policy for Green Conservation” in May 2010 to systematically conserve green in Tokyo. This policy consists of “Policy for the conservation of existing green” where the desirable green to conserve is clarified and “Guidelines for the Green Urban Development” which is providing the green creation measures in the community development. Also we provide “the New Efforts” and are working on the green conservation in cooperation with the municipalities so as to promote further the green conservation and the green community development.
