

## **Post-disaster Risk Assessment in Residential Areas**

Post-disaster Risk Assessment in Residential Areas is a system designed to reduce and prevent secondary disasters in the event residential areas are struck by disasters such as an earthquake or torrential rains that have caused major, widespread damage, by enabling the prompt and accurate assessment of the damage and the distribution of information to residents. Based on objective nationwide standards, visible damage is given a numerical score. The results of the assessment are then indicated through three different color-coded stickers, which also list information such as points of caution and where to contact for more information.

Working with the municipalities, the TMG trains risk assessors, and is also developing a system to cooperate with other prefectures.
